LAMINATING

Providing industry-leading adhesive products since the 50's

As providers to the laminating industry since 1959, we have developed an expert understanding of how to best meet customers' needs.

We manufacture adhesives suitable for all types of lamination and laminator machinery, having knowledge of the unique requirements of each brand of machinery enables us to formulate products that offer exceptional running performance ensuring our customers are capable of making premium products at minimal cost.

We understand that the process of paper manufacture means the consistency of board moisture is not always ideal. We can provide solutions suitable for any variance in humidity in in-coming materials whilst ensuring your product remains perfectly flat and blister free.

Our product range includes solutions for problems such as delamination, slip, wash boarding / warping and bubbling that can be applied at minimal coat weights and provide high mileage making them cost effective in use. We also have adhesives for specialist applications such as fire retardant boards, conservation / archival board, composting and to prevent colour show through.

Should your specific adhesive requirement not be met by one of our existing products, our technical team will create a bespoke product that has been designed with your exact operation in mind.
